

Campbell & Co. and Cascadian Water TEAM UP to make life more enjoyable for Washington State couple

-- Compact, simple solution is cost-effective and eco-friendly --

Residents of Kennewick, Washington for 72 years. Nadine and Lewis haven't always had softened water. When they moved into their home 8 years ago it came with a softener. Worried that their traditional softener wasn't as efficient as it was when it was installed 14-years ago, they asked Jeff Bryant of Campbell & Co. to take a look at it when he was inspecting their water system.

Nadine and Lewis expressed concern about using salt and having to transport it. When Jeff presented the benefits of using the ICS-STP Nadine and Lewis liked the sound of it. When they heard that they could replace their existing softener and their under the sink filtration system with it, they were sold. Relieved that they would no longer have to pack salt into their home to fill their brine tank, or replace point of use filters, they scheduled their install, which didn't involve needing access to power or a place to plumb a drain as a traditional softener would have.

After having their Cascadian Water ICS-STP installed they noticed changes in their water right away. Nadine commented, "I did notice that my dishes are coming out less spotted than before".

One of her favorite features is the great tasting water that the ICS-STP is producing, "What I enjoy most I think, is the good tasting water, it tastes just like spring water. It has a sweet fresh taste to it".

Another notable difference Nadine and Lewis have noticed and like is that they no longer feel slippery when showering with their softened water like before. They said they feel clean now when they get out of the shower.

Lewis and Nadine next to their Integrated Cartridge System STP

Cascadian Water offers water treatment that gives people the ability to enjoy their life without worrying about their water treatment system. By using PolyHalt® Cascadian Water customers can have treated water at every tap and they only need to change filters once a year.

"I drink more water because it tastes so good now"

"I noticed that my dishes aren't as spotted as before";

"I noticed right away that when I take a shower that I don't get the slippery feeling I had before".

~ Nadine & Lewis, Customer
